WORKING
FOR RESEARCH
AND INDUSTRY
SINCE 2003

CCRT DNA

CEA expertise and competencies

Offer a best-breed high-performance computing and data analytics centre.

From research to industry

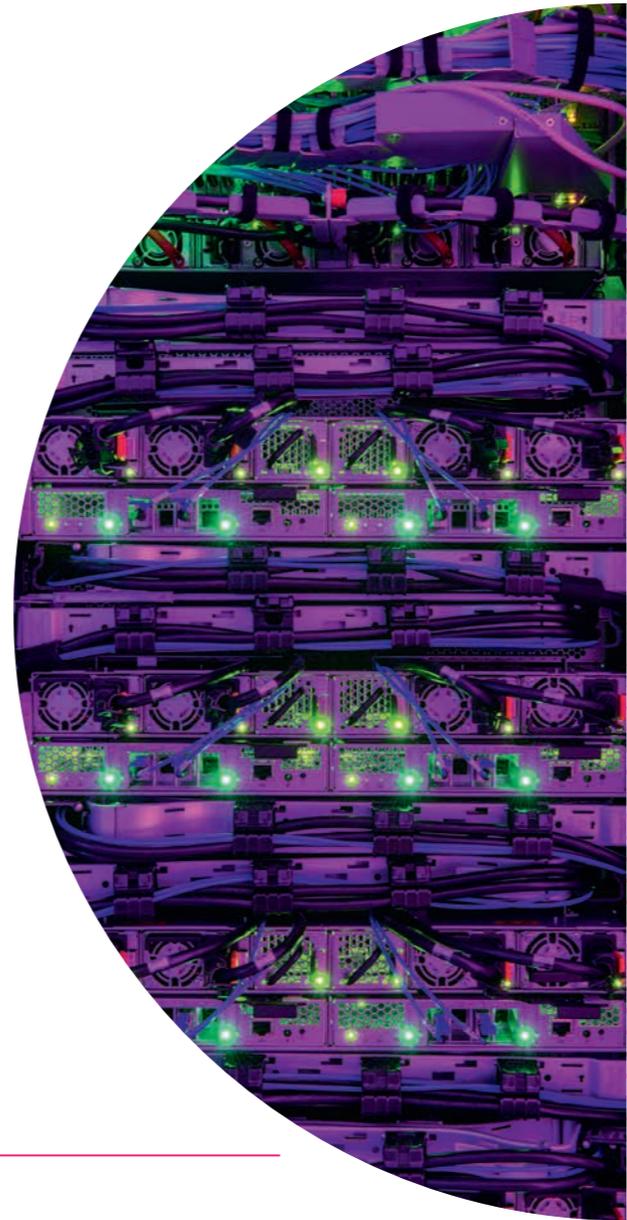

Support industrials in their use of numerical simulation and high-performance data analytics and prepare simulation tools for the future through partnership agreements.

Reliability and performance

Integrated services in a secure and reliable HPC environment.

Sharing of partners' experiences

Workshops, technology watch, an annual scientific conference.

The CCRT, located in Bruyères-le-Châtel (France) under the responsibility of CEA DAM Île-de-France teams, is one of the few computing centres in Europe open to industry.

It offers a rich portfolio of high-performance computing (HPC) competencies, matching the growing needs of its partners, by combining secure and flexible access to its resources in a sustainable way.

TOPAZE

- Atos BullSequana XH2000 system, liquid-cooled (DLC: Direct Liquid Cooling)
- 864 nodes with 128 2.45 Ghz AMD-Milan cores each, and 256 GB of memory/node
- 48 nodes with 4 Nvidia A100 processors + 2 AMD-Milan processors, and 512 GB of memory/node
- 4 nodes with 2 AMD-Milan processors, 1 Nvidia V100 processor, and 4 TB of memory/node
- InfiniBand HDR interconnect network
- Private storage system: 3 PB, Lustre, 280 GB/s bandwidth
- CEA OCEAN system software stack and administration environment
- Batch and scheduler system: Slurm®

COMPUTING RESOURCES

CCRT computing resources benefit from the exceptional infrastructures of CEA's Very Large Computing Centre (TGCC).

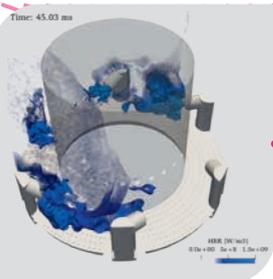

CCRT core element is **TOPAZE supercomputer**, a cluster built and installed by Atos-Bull in 2021. With an initial computing power of 8.8 petaflops, TOPAZE is sized to meet the growing needs of the partners thanks to its scalable architecture. CCRT benefits from the shared storage infrastructure of the TGCC, which can accommodate large volumes of data over the very long term. Since 2018, CCRT has deployed an Atos Quantum Learning Machine, with a 30 qubits emulation capacity. This gave CCRT's partners early opportunities to explore quantum computing programming and potential use cases.

Post-processing, remote visualization resources and virtualization features underlie and complement the range of services proposed to the users. **Access to CCRT** is ensured by secure links via the national telecommunications network for technology, teaching and research (Renater).

KNOW-HOW AND EXPERTISE

With the expertise developed as part of the CEA Simulation programme, the teams of the Department of Simulation and Information Sciences of the CEA DAM Île-de-France put their knowledge at the service of CCRT. All the skills required for the design and implementation of very large computing infrastructures with a high-performance and secure production and data management environment can be found at CCRT: from energy optimization of the computing centre to the development of open source system software (Lustre, Slurm®, WI4MPI, Selfie, Robinhood...).

A RELIABLE, SECURE ENVIRONMENT

CCRT runs operations round-the-clock except for scheduled maintenance periods. On-site support from the Atos supplier and expert administration teams with on-call duty optimize the availability of the computing service. CCRT takes access and data management security very seriously. A CEA IT security unit is in charge of a supervision system that monitors, detects and analyses alerts, allowing the security managers to react extremely rapidly.

USER ASSISTANCE

- A single point of contact for the users:
hotline.tgcc@cea.fr - tel.: +33 1 77 57 42 42
- A specific website for the users:
<https://www-ccrt.ccc.cea.fr>
- Application support: a team of HPC specialists provides its expertise on the porting and optimization of user codes on the CCRT machines.

CCRT ASSETS

TRAINING

- Regular training sessions cover parallel programming (MPI, OpenMP, as well as GPU programming, Quantum Computing, development environments and tools). Technology watch and presentation of new technologies, before their integration into the production machines, helps the adaptation of applications.
- CCRT offers “getting started” sessions for the newcomers.

DYNAMIC EXCHANGES BETWEEN PARTNERS

In order to share the expertise of its teams with its partners, and more generally take advantage of the strategies and skills of each one, CCRT regularly organises technological or thematic workshops. CCRT also organizes an annual scientific workshop, open to all, which is an opportunity for the users to stay tuned with the latest technologies and services deployed. Those workshops are also the opportunity for CCRT users to present their scientific results.
